

SECTION 1 - SECTION 1

Question No.1

Barriers in communication due to linguistic capacity of the sender and the receiver are known as:

- Semantic barriers
- Personnel barriers
- Psychological barriers
- Mechanical barriers

Question No.2

The nurse would expect which of the following findings in a patient as a result of physiological effect of stress on the reticular formation

- An episode of diarrhea while awaiting a painful dressing change
- Inability to sleep at night before beginning to self-administer insulin
- Refusing to communicate with nurse while awaiting cardiac catheterization
- Increased blood pressure, decreased urine output and hyperglycemia following a car accident

Question No.3

Select the theorist who has NOT developed a management theory:

- Frederick Taylor
- Henri Fayol
- Mary Parker Follet
- Madeline Leninger

Question No.4

Mr. X is a known case of hypoparathyroidism and is admitted in medical ward with severe dehydration. On BP cuff inflation, the patient has a flexion of the wrist with extension of the interphalangeal joints and adduction of the thumb. He is demonstrating a sign of which electrolyte abnormality

- Hyponatremia
- Hyponatremia
- Hypocalcaemia
- Hypercalcemia

Question No.5

A periodic formal evaluation of how well faculty have carried out their duties over a specific time is:

- Performance appraisal
- Staff development
- Management by objectives
- Welfare measures

Question No.6

Patient safety is an important element of an effective, efficient health care system where quality prevails. Which one of the following true about patient safety.

- To do with lack of harm
- Focus on overall care experience as better one
- Focusses on getting job done on time

- Doing things well

Question No.7

One-day workshop was conducted to improve emergency nursing skill. Ten nurses participated in that workshop; pretest and post test scores were obtained before and after the workshop was given below. Is the workshop statistically significant in terms of benefit for nurses or not (table value 2.26)?

Pretest Score: 05 16 14 12 06 10 11 15 04 07

Post test Score: 11 17 15 14 09 16 12 17 13 16

- Calculated value is 2.0 < tabulated value 2.26 and nurses were not Benefited
- Calculated value is 1.5 < tabulated value 2.26 and nurses were not Benefited
- Calculated value is 3.0 > tabulated value 2.26 and nurses were Benefited
- Calculated value is 2.5 > tabulated value 2.26 and nurses were Benefited

Question No.8

If the scale measures what it is intended to measure, it is said to be

- Reliable
- Valid
- Genuine
- Accurate

Question No.9

Mr. YZ is the first case of EBOLA diagnosed in his village, he will be known as

- Index case
- Secondary case
- Refer case
- Primary case

Question No.10

Identify the type of sampling that is NOT used in qualitative research:

- Random sampling
- Purposive sampling
- Convenience sampling
- Snowball sampling

Question No.11

A systematic arrangement of the sum total of selected learning experiences planned by a school for a defined group of students is:

- Correlation chart
- Organizational chart
- Syllabus
- Curriculum

Question No.12

Which of the following statement fulfills the objective related to affective domain in student

- Student can write a letter
- Student understands anatomy of heart
- Student values honesty
- Student paint a picture

Question No.13

When both functional and team nursing methods are combined to deliver nursing care, it is known as:

- Total patient care
- Modular nursing
- Primary nursing method
- Team method

Question No.14

The most basic level of cognitive domain of educational objectives is:

- Analysis
- Knowledge
- Evaluation
- Application

Question No.15

From the theories given below, identify a grand theory:

- Parse' Human Becoming Theory
- Roy's Adaptation Theory
- Pender's Health Promotion Model
- Peplau's Theory of Interpersonal relations

Question No.16

The process of developing specific predictions from general principles is called:

- Inductive reasoning
- Data transformation
- Deductive reasoning
- Data triangulation

Question No.17

Identify the ethical principle which states that the researcher has a duty to minimize harm and maximize benefits:

- Full disclosure
- Veracity
- Beneficence
- Justice

Question No.18

Leiningers' Sunrise model is associated with

- Disease prevention
- Translational research
- Evidence based Nursing practice
- Transcultural nursing

Question No.19

The research design which tests not only main effects but also interaction effects is called:

- Pre-experimental design

- Quasi-experimental design
- Factorial design
- Post-test only design

Question No.20

A formal, detailed systematic review of records of discharged patients to identify rate of falls from the bed is called as:

- External audit
- Prospective audit
- Clinical audit
- Retrospective audit

Question No.21

Under the doctrine where a master is responsible for the acts of his servants so that an employer should be held legally liable for the conduct of employees whose actions he or she has a right to direct or control, refers to

- Avoiding malpractice claims
- Respondeat superior
- Product liability
- Vicarious responsibility

Question No.22

Bio-medical waste rules 2016 apply to which of the following?

- Radioactive waste
- Municipal solid waste
- Chemical waste
- E waste

Question No.23

A nurse manager adapts SBAR as a communication tool to her colleagues. R in SBAR means

- State what you would like to do to address the problem
- Describe the background
- Briefly state the issue you want to discuss
- State what you think the problem is

Question No.24

The nurse identifies the nursing diagnosis of risk for impaired skin integrity related to obesity and loss of skin elasticity for a patient. The most appropriate expected patient outcome related to this nursing diagnosis is that

- The patient's skin is intact
- Patient changes position every 2 hours to prevent bedsores
- Patient achieves normal weight for height
- Patient's linen will be changed if it becomes wet

Question No.25

An in-depth assessment of quality using the patients chart after the patient has been discharged is referred to as:

- Concurrent audit

- Satisfaction survey
- Consumer survey
- Retrospective audit

Question No.26

Identify a barrier in time management:

- Perfectionism
- Clear goals
- Delegation
- Prioritization

Question No.27

In an education program, a group of 10 people speaking on a topic of common interest is called:

- Symposium
- Group discussion
- Vocational curriculum
- Panel discussion

Question No.28

Dr.Elizabeth Kubler Ross described five stages of grief. The last stage is:

- Acceptance
- Depression
- Anger
- Denial

Question No.29

Which one of the following is not taken into consideration while preparing the blue print for a test?

- Form of question
- Topic
- Teaching time
- Instructional objectives

Question No.30

In this method of teaching, the presence of patient is not necessary

- Bed side clinic
- Nursing rounds
- Nursing care confere
- Case study method

Question No.31

Quality council of India set up to establish and operate accreditation program for health care organization such as

- National accreditation board for health care providers
- National accreditation board for hospital and health care providers
- National assessment board for hospital and health care
- National accreditation Board for hospital

Question No.32

The most widely used statistic for evaluating internal consistency is:

- Z test
- Rho
- Cronbach's alpha
- Chisquare

Question No.33

One advantage of use of informatics in health care delivery is

- The ability to maintain high standards of care
- Access to standardized plans of care that are available to that are available for most of the health problems
- Improved communication of patient's health status to the health care team
- Increased patient anonymity and confidentiality

Question No.34

Which type of validity tests whether a measure is consistent with a criterion to gold standard, measured to a future point of time ?

- Content validity
- Concurrent validity
- Predictive validity
- Convergent validity

Question No.35

Identify the condition when research findings cannot be generalized to the population:

- Crossover
- Heterogeneity
- Randomization
- Homogeneity

Question No.36

How random error can be minimized?

- Increasing sample size
- Decreasing sample size
- Improving quality control laboratory tests
- Training of study investigator

Question No.37

Staff functions, duties, responsibilities and operations are outlined in the:

- Job title
- Job description
- Job specification
- Job analysis matrix

Question No.38

The type of discussion where a group of 6-8 qualified experts discusses a topic in front of an audience is called:

- Symposium
- Group discussion
- Workshop
- Panel discussion

Question No.39

Hawthorne effect is a potential problem in research. This is a:

- Researcher bias
- Controlled effect
- Placebo-type effect
- Subject bias

Question No.40

The process of choosing one course of action over another refers to

- Decision making
- Critical thinking
- Inductive reasoning
- Problem solving

Question No.41

The nursing theory concerned with the science of unitary human beings was described by:

- Imogne King
- Sr.Callista Roy
- Florence Nightingale
- Martha Rogers

Question No.42

According to Iowa model in an evidence based practice, the triggers for practice change could be based on

- Scientific reasoning
- Knowledge
- Nursing process approach
- Peer review

Question No.43

Identify the correct meaning of 'Induction training' which is a staff development activity:

- Brief standardized introduction to the organization consisting of policies, rules and regulations
- Planned training program to change attitude
- In-service education to increase the knowledge and skills required in the clinical area
- Training after completion of basic professional education to further improve competence

Question No.44

The method of identifying an organization's strengths, weaknesses, opportunities and threats is known as:

- Strategic planning
- Operational analysis
- SWOT analysis

- Quality assurance

Question No.45

Career development policies are:

- Meant to address unauthorized absence
- Retention strategies
- Meant to address authorized absence
- Strategies to increase staff turnover

Question No.46

In which type of leadership does the leader facilitate the group through the entire decision making process?

- Transformational leadership
- Participative leadership
- Autocratic leadership
- Transactional leadership

Question No.47

An outline of the topics of a subject to be covered in specific time is called:

- Syllabus
- Curriculum
- Course
- Program

Question No.48

Union is strength. This principle of management is known as:

- Division of work
- Unity of command
- Sacalar chain of command
- Esprit de Corps

Question No.49

Any test that measures the attainments or accomplishments of an individual after a period of training or learning is known as

- Intelligence test
- Personality test
- Achievement test
- Aptitude test

Question No.50

A type of educational assessment which is generally carried out throughout a course or project is:

- Summative assessment
- Formative assessment
- Ipsative assessment
- Criterion referenced assessment

Question No.51

An employee must get orders from one superior only. This principle of organization is referred to as:

- Integration Vs Disintegration
- Unity of Command
- Division of work
- Delegation of authority

Question No.52

A care model consisting of various personnel such as professional, technical and nurse aides in the delivery of nursing care led by a nurse leader is referred to as:

- Modular nursing
- Case management method
- Team method
- Primary nursing method

Question No.53

Which of the following is a dimensional teaching aid?

- Model
- Display board
- Still picture
- Black board

Question No.54

Which of the following is a characteristic feature of autosomal recessive inheritance

- There are no carriers
- Consanguinity
- Father to son transmission
- All generations will have disease

Question No.55

Concentration of decision making authority at the top management is known as:

- Equity
- Stability of tenure
- De-centralization
- Centralization

Question No.56

Mr. X has been infected in the month of January and showed maximum infectivity in march, the time interval is known as

- Generation time
- Serial interval
- Incubation period
- Secondary attack rate

Question No.57

An educational institution that operates independently but also has a formal collaborative agreement with another, usually larger institution that may have some levels of control over it is known as :

- Affiliation college

- Accredited college
- Autonomous college
- Governing body

Question No.58

Identify the type of analysis used to compare health outcomes and resource costs of alternative interventions:

- Cost-effectiveness analysis
- Quantity adjusted analysis
- Cost-benefit analysis
- Cost-utility analyses

Question No.59

A population consist of five observations {2,5,3,6,4}, calculate the variance

- 2
- 1
- 4
- 3

Question No.60

The lowest level of measurement is the:

- Nominal measurement
- Ordinal measurement
- Interval measurement
- Ratio measurement

Question No.61

In a given situation group of nurses resist to group influence is evident as members polarize into subgroups; members rebel against demands imposed by the head nurse. The characteristics of the group indicate that the group development stage is

- Storming
- Forming
- Performing
- Norming

Question No.62

Feedback from multiple sources about the employees performance is referred to as:

- Management by Objective method
- Critical incidence technique
- 360-degree Feedback appraisal
- Field review method

Question No.63

When mean deviation is divided by the average used in finding out the mean deviation itself, the resulting quantity is

- Coefficient of mean deviation
- coefficient of standard deviation
- Range

- Mean deviation

Question No.64

ATLAS ti is the software program used to analyse:

- Continuous variables
- Qualitative data
- Quantitative data
- Categorical variables

Question No.65

The nuchal translucency of a fetus was found to be high on ultrasound at 14 weeks. The nurse understands that this could mean

- Baby will be Down's syndrome.
- The mother needs to be further investigated
- Baby may have neck deformities
- Baby will have congenital malformities

Question No.66

Identify the organizational behaviour model which focuses on positive organizational behaviour:

- Autocratic model
- Custodial model
- Collegial model
- System model

Question No.67

The centre point of lesson plan is

- Student
- Environment
- Principal
- Teacher

Question No.68

Which type of philosophy encourages self-learning, play-way method of learning, experimentation and learning by doing?

- Naturalism
- Pragmatism
- Idealism
- Realism

Question No.69

The sampling technique in which every unit in the population has an equal chance of being selected is?

- Probability sampling
- Purposive sampling
- Subjective sampling
- Convenience sampling

Question No.70

Tuckman's Stages Model for group formation describes highest level of agreement and conflict in:

- Norming stage
- Storming stage
- Forming stage
- Adjourning stage

Question No.71

In qualitative research, sampling is done to the point at which no new information is obtained and there is redundancy. This is called:

- Theoretical sampling
- Data saturation
- Sampling disconfirmation
- Sampling confirmation

Question No.72

The abbreviation "MeSH" in the pubmed database is?

- Medical Subject Helpline
- Medical Subject Heading
- Medical Services Helpline
- Medical Services Heading

Question No.73

A nurse manager in planning her performance appraisals, he or she is much more likely to view the performance appraisal as a means of promoting employee growth. This principle refers to

- Accountability
- Autonomy
- justice
- Beneficence

Question No.74

Which of the following ethical principles denotes "Do no harm" concept?

- Justice
- Autonomy
- Non-maleficence
- Beneficence

Question No.75

An under-graduate student nurse is very reluctant to talk to a patient once she finds out that he is terminally ill and not likely to live long. Her teacher identifies that the student is in need of:

- A change of patient
- Guidance
- Counseling
- A lecture on communication skills

Question No.76

Regression analysis is used to:

- Predict outcomes

- Test difference of means
- To measure standard variation
- Test analysis of variance

Question No.77

Checklist are best suited to assess

- Aptitude
- Performance
- AAttitude
- Intelligence

Question No.78

Biomedical waste collected in which of the following bin that is managed by incineration

- Red in colour
- Blue in colour
- Black in colour
- Yellow in colour

Question No.79

Which of the following objective is also known as behavioral objective?

- Departmental objectives
- Institutional objectives
- Instructional objectives
- Intermediate objectives

Question No.80

Which one of the following sections of a typical research paper is most likely to have the highest readership?

- Title
- Results
- Abstract
- Methods

Question No.81

Select the research design that would most suit when one group of subjects is exposed to more than one condition or treatment in random order:

- Comparative design
- Crossover design
- Cross-sectional design
- Experimental design

Question No.82

A verbal snapshot of an incident related to the nursing student in the clinical area is called:

- Interview
- Visual analogue scale
- Cumulative record
- Anecdotal record

Question No.83

One among the ward in tertiary health centre has an outbreak of MRSA, which of the following is appropriate mode of containing the infection

- Wearing masks
- Hand washing before and after touching the patients
- Fumigation of the ward
- Vancomycin to all patients

Question No.84

Power wielded as a result of one's knowledge, experience and skill is called:

- Legitimate power
- Expert power
- Coercive power
- Reward power

Question No.85

Individual differences in interest, ability and capacity in a specific field is measured by applying one of the following test:

- IQ test
- Attitude test
- Mental ability test
- Aptitude test

Question No.86

What do you mean by type-II error?

- The null hypothesis is rejected when it is true
- The null hypothesis is rejected when it is false
- The null hypothesis is not rejected when it is true
- The null hypothesis is not rejected when it is false

Question No.87

After completion of the M.Sc. Psychiatric nursing, the student can get this qualification registered in the state nursing council as:

- A new qualification
- University qualification
- RN & RM
- An additional qualification

Question No.88

All that is learnt during school/college activities that is not a designated part of official curriculum is

- Observed curriculum
- Vocational curriculum
- Curriculum as experienced
- Hidden curriculum

Question No.89

Which nursing theory addresses flexible line of defense as a core theoretical concept

- Rogers theory
- Nightingale's theory
- Parse's theory
- Newman's theory

Question No.90

Name the constituent board of quality control of India, set up to establish and operate accreditation program for health care organizations as well as to set a framework for quality assurance:

- NABL
- NABH
- DMHP
- NMHP

Question No.91

Single blinding in a RCT means?

- Blinding of Participants and investigators
- Blinding of Participants, investigators and analysts
- Blinding of Participants
- Blinding of Participants and analysts

Question No.92

The study design, that is better suited to demonstrate a temporal association between exposure and disease

- Ecological study
- Case-control study
- Cross-sectional study
- Cohort study

Question No.93

The Donabedian Model is a quality framework indicating:

- Structure, process and outcome
- Dynamic relationships with indicators
- Continuity, consistency and competency
- Inputs, methods and outcome

Question No.94

The nursing teacher listens actively to the student nurse when she talks about her problem with her room mates, helps the student to understand her problems and identify solutions that are practical. This process is called:

- Vocational guidance
- Non-directive counselling
- Individual guidance
- Directive counseling

Question No.95

Normal Distribution is

- Nomokurtic

- Mesokurtic
- Leptokurtic
- Platykurtic

Question No.96

Identify the type of sampling that is NOT used in qualitative research:

- Random sampling
- Convenience sampling
- Snowball sampling
- Purposive sampling

Question No.97

Identify the action which is not disciplinary in nature:

- Suspension
- Dismissal
- Pay cut
- Counseling

Question No.98

The best method to increase internal validity of a study would be to:

- Select representative settings
- Use random sampling
- Increase the sample size
- Select a strong research design

Question No.99

Process of obtaining numerical description of the degree to which an individual possess a particular characteristic is:

- Evaluation
- Assessment
- Measurement
- Judgment

Question No.100

The organization chart which depicts same skilled employees pooled together in a group reporting to the respective manager of their group with two axes, one representing the vertical and another the horizontal chain of command is known as:

- Hierarchical organizational chart
- Flat organizational chart
- Matrix organizational chart
- Formal organizational chart
